

## Medline's Contain-It™ Program

Helping you put a wrap on your sterilization costs.

A financial program that lets you convert from disposable sterilization wrap to the industry's most advanced sterilization container system with no up-front costs or budget busting capital expenditures.

## With Medline's Contain-It™ Program, we guarantee you savings and we keep it simple...

With the Contain-It program, Medline will provide your facility a full complement of Steriset containers and guarantee monthly savings of 10% versus your existing disposable wrap costs. Over the life of the containers, your savings will likely grow to over 60%!

Our Contain-It program makes it as easy as 1-2-3...

1. **Identify your existing disposable wrap costs including sterilization tape.**
2. **Meet with your Medline representative to select a full complement of Steriset containers.**

After performing a comprehensive nationwide study, Medline has developed a simple calculation that will assure your facility has sufficient containers to replace your disposable sterilization wrap.

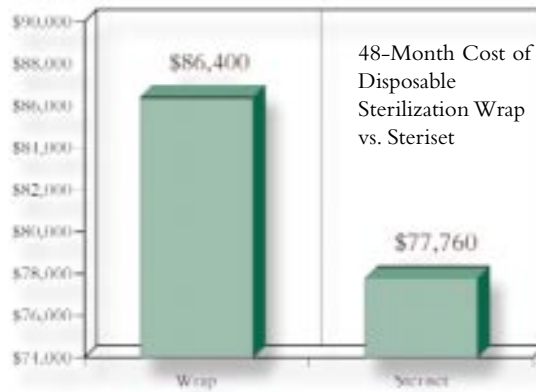

Your total container allowance is determined by the following figure:  
Annual wrap expenditure x 4 (years) x 90% = Total Container Allowance.

Your actual savings may be more or less than 10% if you deviate from the container allowance.

3. **Start saving today with no up-front costs.**

If you currently use \$1,800/month in wrap, your monthly payment for Steriset containers would only be \$1,620 a month for 48 months, interest free. After 48 months, you own the containers and have no additional monthly expenditures.

**Save 10% a month over disposable wrap during the first 48 months.**

**Save more than 60% over the life of the containers.**

(Average container life is 10 years)

## Advantages of Steriset® Containers over Wrap

### Completely Reusable

Because of Steriset's unique design, there is no need for disposable filters or locks and arrows that other sterilization containers require. Once the containers are purchased, there are no additional disposable costs.

### Hygienically Secure

Because Steriset containers are a sealed, rigid system, you eliminate the common problems associated with wrap such as pinholes, rips or tears. Plus, wet packs are no longer an issue. With Steriset there is no clear way for bacteria to penetrate the container once it's sterilized.

### Easy to Use

Over the course of each day, considerable time is spent wrapping and handling trays. Multiply that over the entire year and it adds up to a great deal of valuable time that can be put to better use.

With Steriset, you put the basket in the container, latch it and sterilize it. It's that easy! You'll save, on average, 600 hours per year.

### Cost Effective

Not only will we guarantee savings over what you currently spend in wrap, you'll also reap other financial benefits from switching to containers including:

- Labor costs associated with wrapping the trays.
- Disposal costs of used wrap.
- Reprocessing costs that occur as a result of pinholes, wet packs and tears associated with disposable wrap.
